

How DRIP EDGE will add

5

YEARS LIFE TO YOUR ROOF

The purpose is to "Connect" the edge of the roof, to the entrance of the gutter, to result in easy constant flow of water from the surface of the roof, into the gutter. With little chance of ice damming getting under the shingles, or behind the gutters.

How Do Sargeant's Roofing Contractors Install It?

- 5 Roofing Shingles
- 4 Roof Underlayment
- 3 Drip Edge
- 2 Ice shield to protect the gap roof deck and fascia
- 1 Roof deck Plywood, Rake board and fascia

What is Drip Edge?

The drip edge is a thin band of a non-staining, non-corrosive, non-rusting metal which is put around the eaves of your house any time roofing specialists install a new roof on your home.

The purpose of it?

To avoid ice dams or snow-fall from getting beneath your shingles and making the decking or underlay moist, which is a common cause of roof leaks, wood decay, mildew, mold, and damage to your eaves troughs!

Correctly installed it can add

25% MORE LIFE TO YOUR ROOF!

How it works

DON'T SWEAT!

Drip Edge rarely costs more than

\$300

for an entire house!

ICE DAMS

WOOD DECAY

DAMAGED GUTTERS

How important is it?

Any company that does not recommend or insist on drip edge does not have your best interests at heart. These are the 3 most common failures to result from a lack of drip edge installed on the roof.

DRIP EDGE is a MUST

Most manufacturers' guarantees for roofing shingles are useless if they're mounted without having a suitable drip edge, so it is **generally to your advantage to ensure it is contained in any new roof top installation.**
